Birds and plants: Cross-taxon species richness

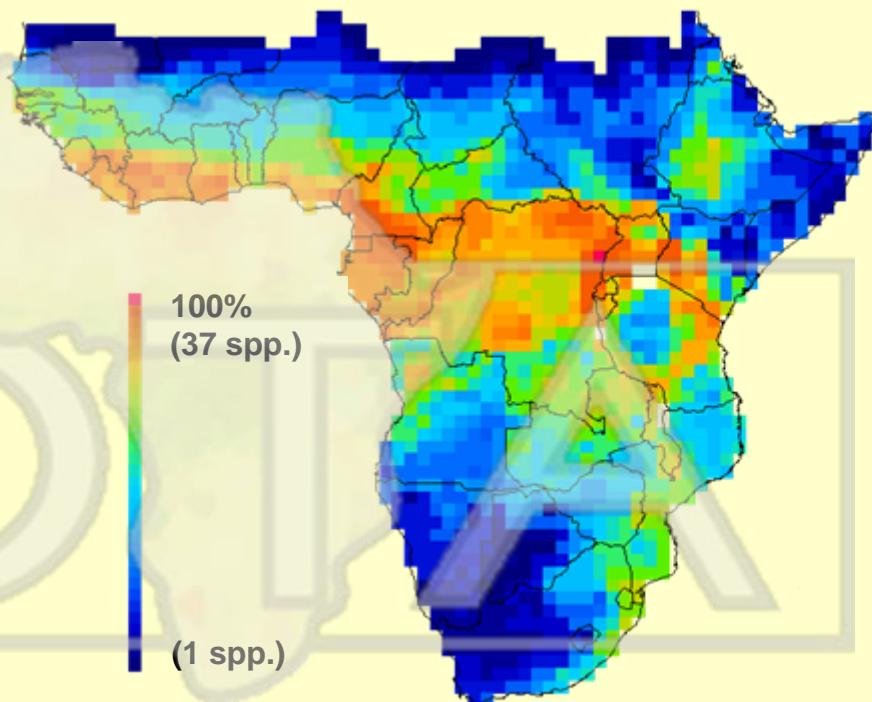

Bird distribution across Africa

All birds

Fruit-eating birds

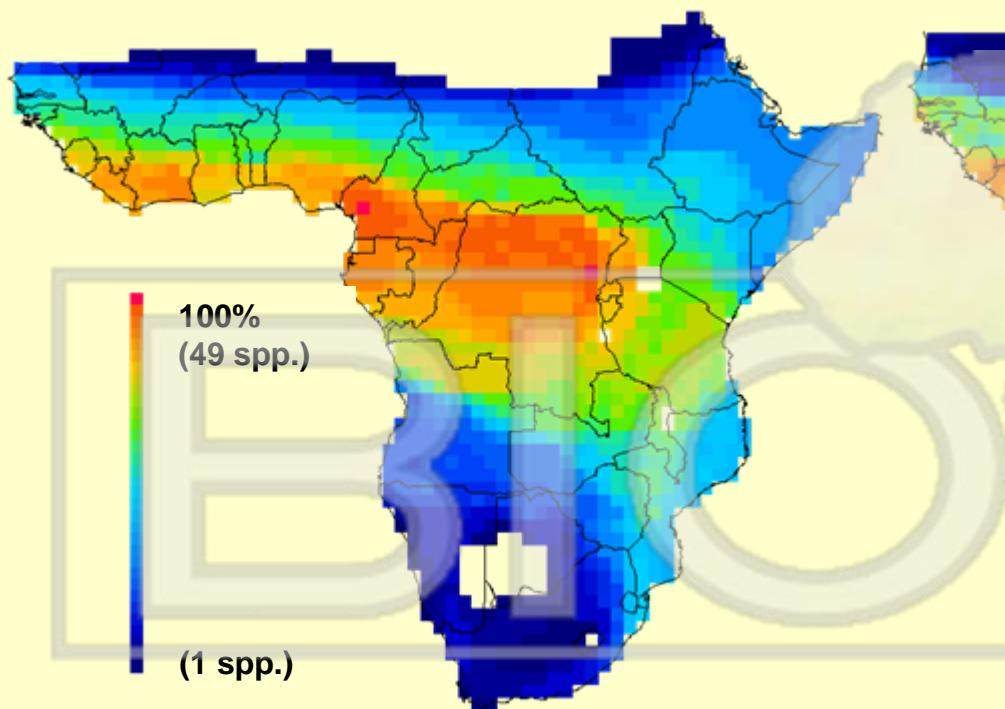

Kissling, Rahbek, Böhning-Gaese, *Proc. Royal Soc. London B* 2007

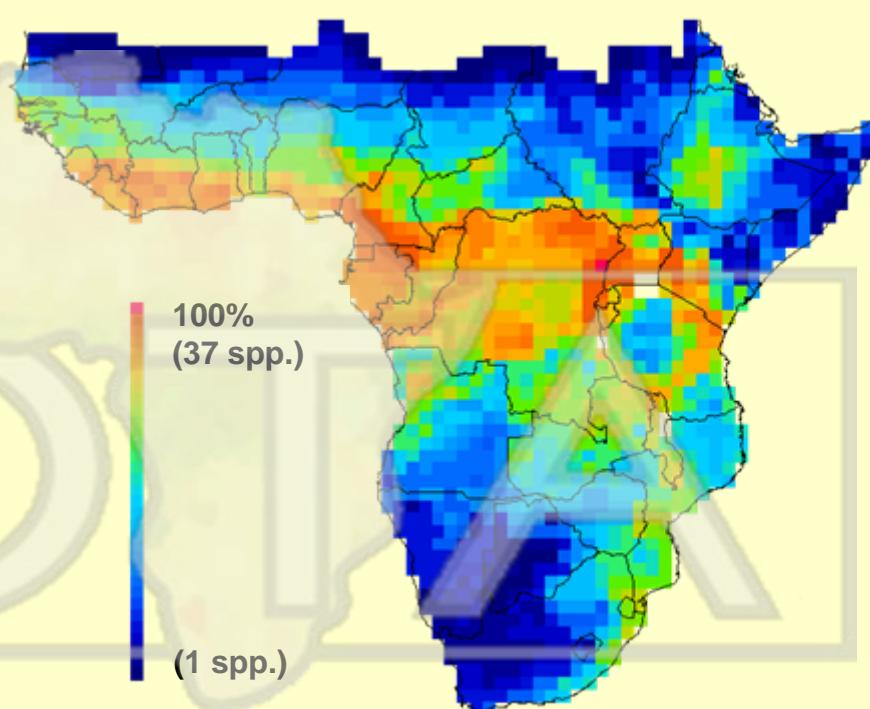

Fruit-eating birds versus fruit-bearing trees

Ficus trees

Fruit-eating birds

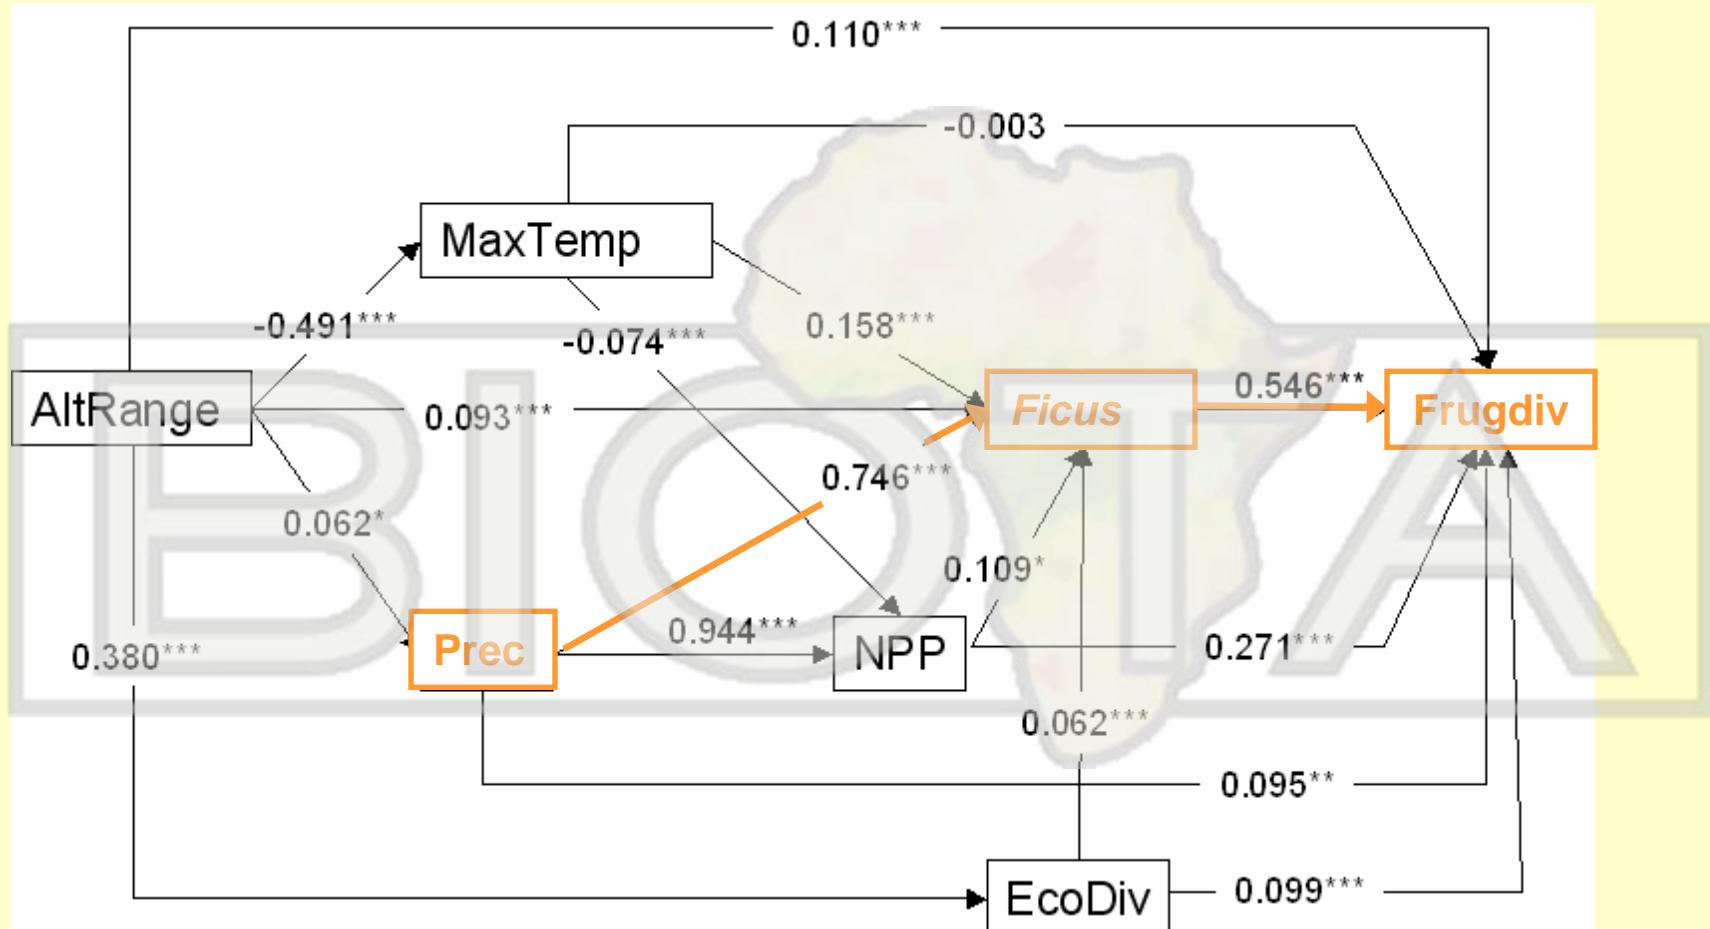

Kissling, Rahbek, Böhning-Gaese, Proc. Royal Soc. London B 2007

Fruit-eating birds versus fruit-bearing trees

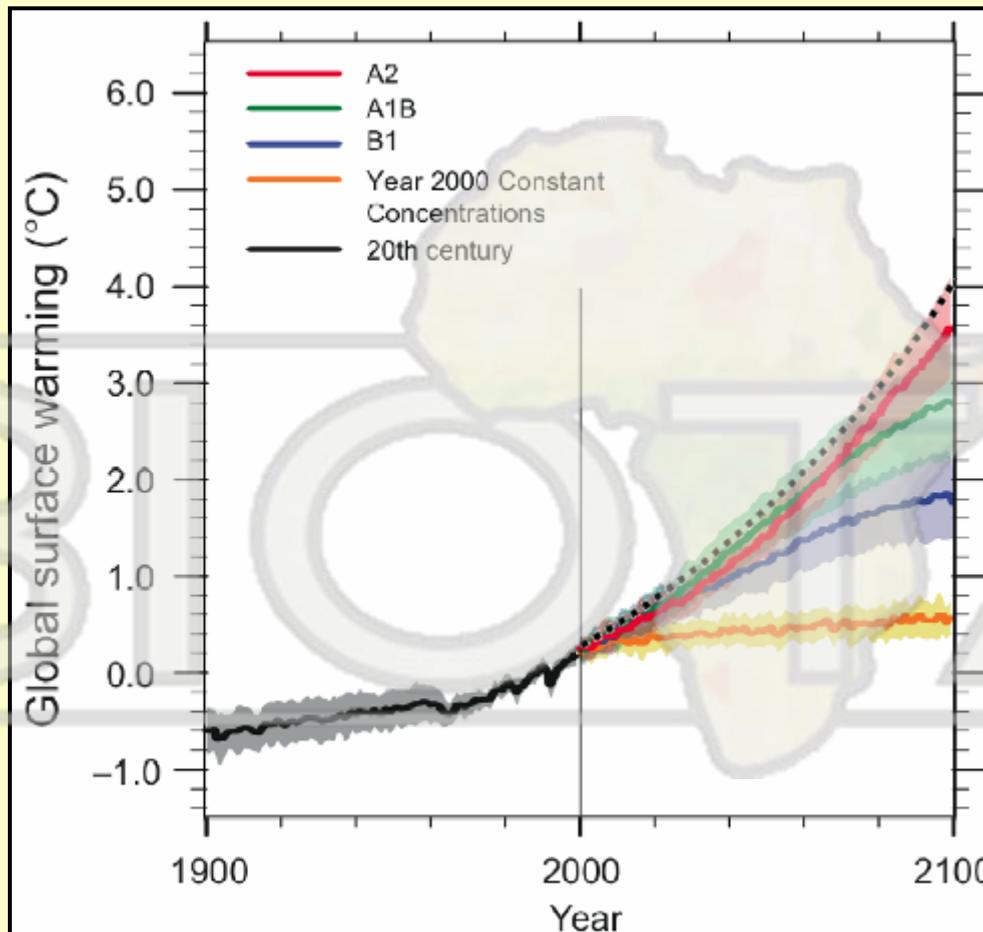

Path analysis

$r^2 = 0.808$, model fit: NFI = 0.923

Kissling et al. Proc. Royal Soc. London B 2007

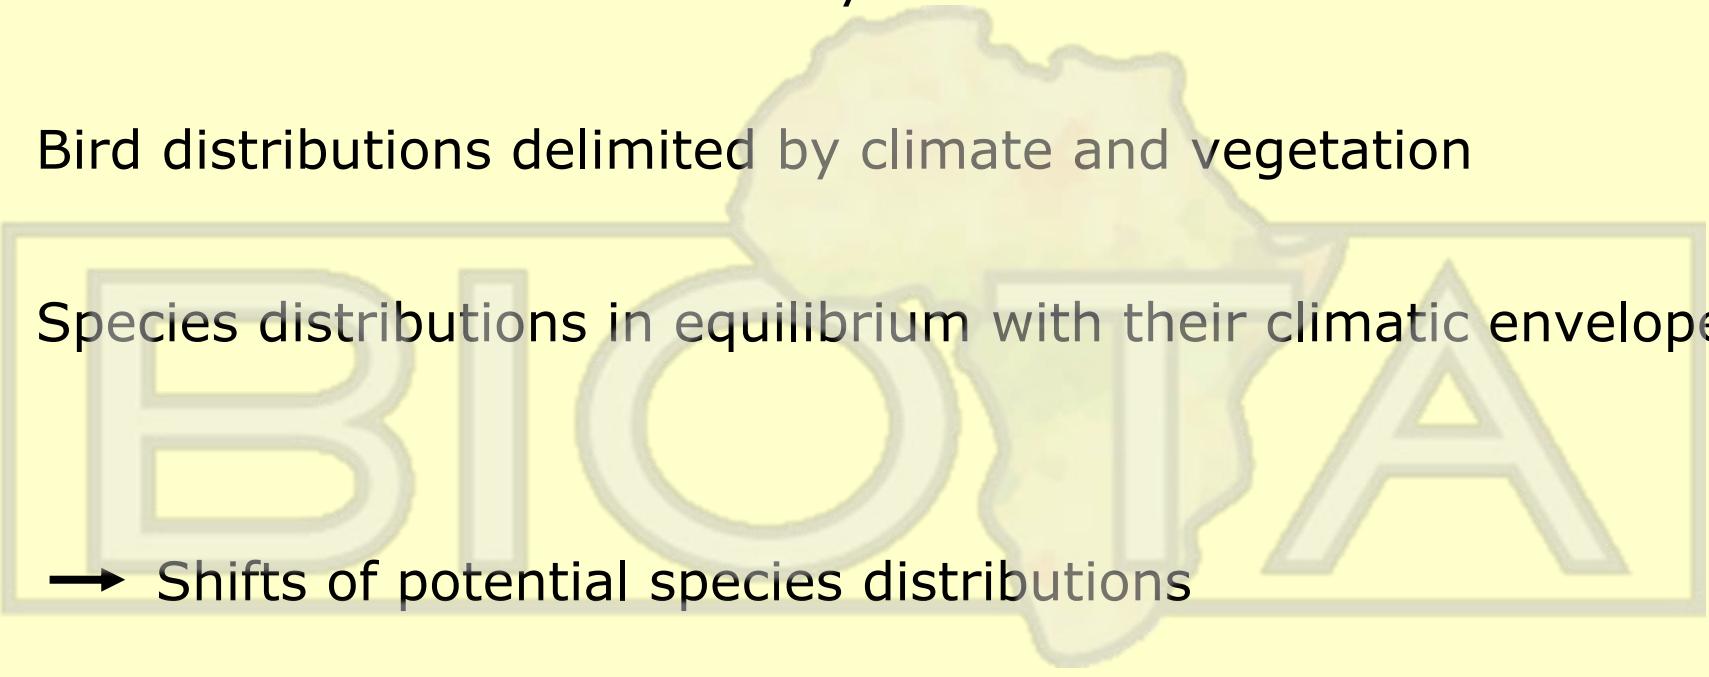

Plant diversity and climate change

INTERGOVERNMENTAL PANEL ON CLIMATE CHANGE

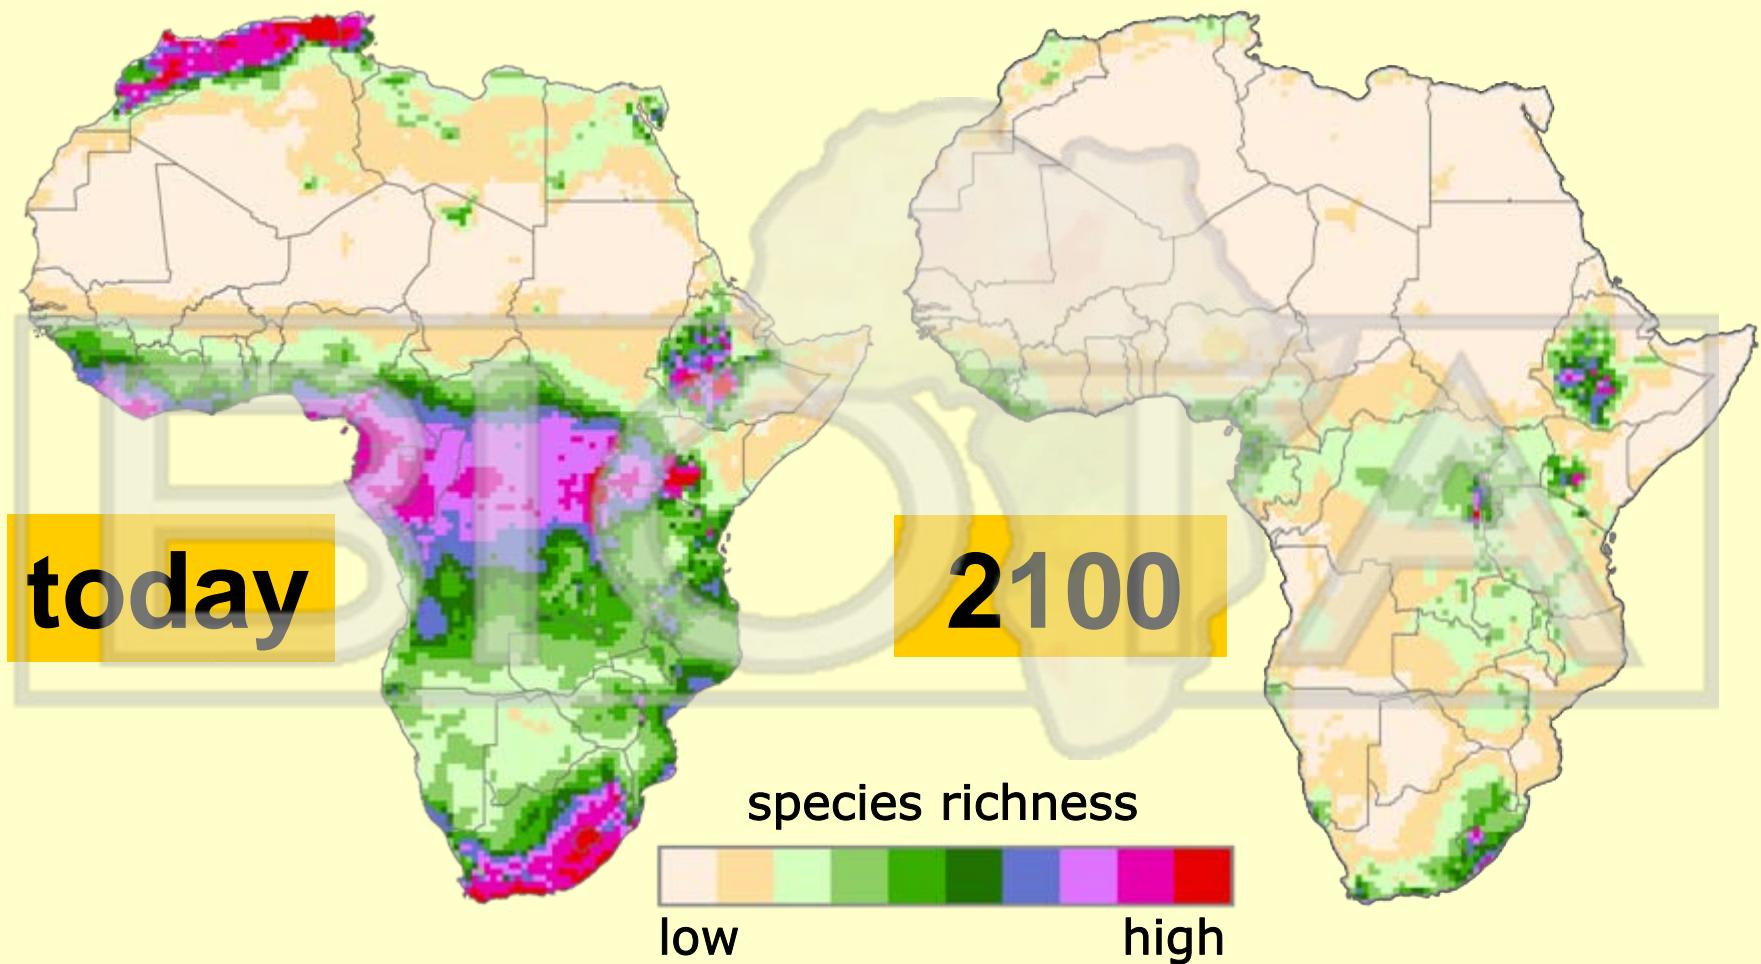

Impact of climate change – Assumptions

- Plant distributions delimited by current climate
 - Bird distributions delimited by climate and vegetation
 - Species distributions in equilibrium with their climatic envelope
- Shifts of potential species distributions
- 
- The BIOTA logo is a large, semi-transparent watermark in the background. It features the word "BIOTA" in a stylized, blocky font where each letter has a different texture or color. The letters are partially obscured by a light gray cloud-like shape.

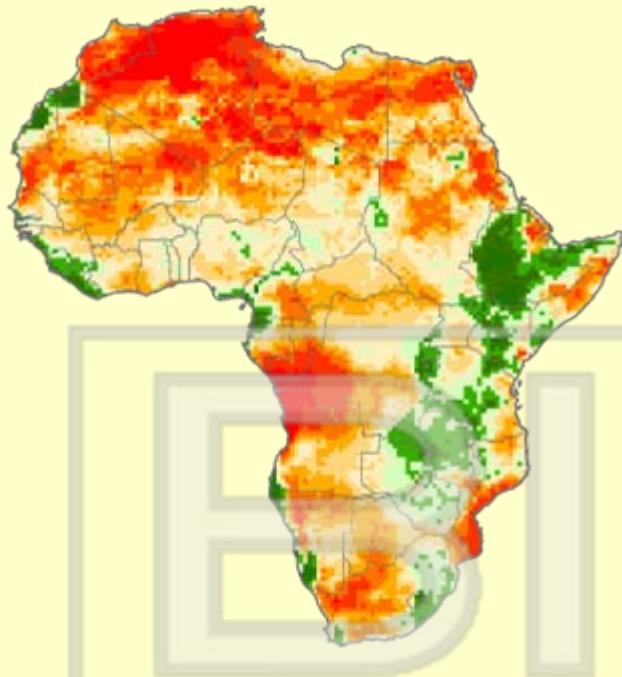

Possible changes in species richness until 2100

Case study Morocco

bioclimate
and plant species
richness

Case study Morocco

- Future changes of bioclimate and species richness (IPCC A2, HadCM3)
- Drâa Basin, southern Morocco (597 relevés)
- Bioclimatic Emberger Index based on temperature and precipitation
- Statistical Model: poisson GLM

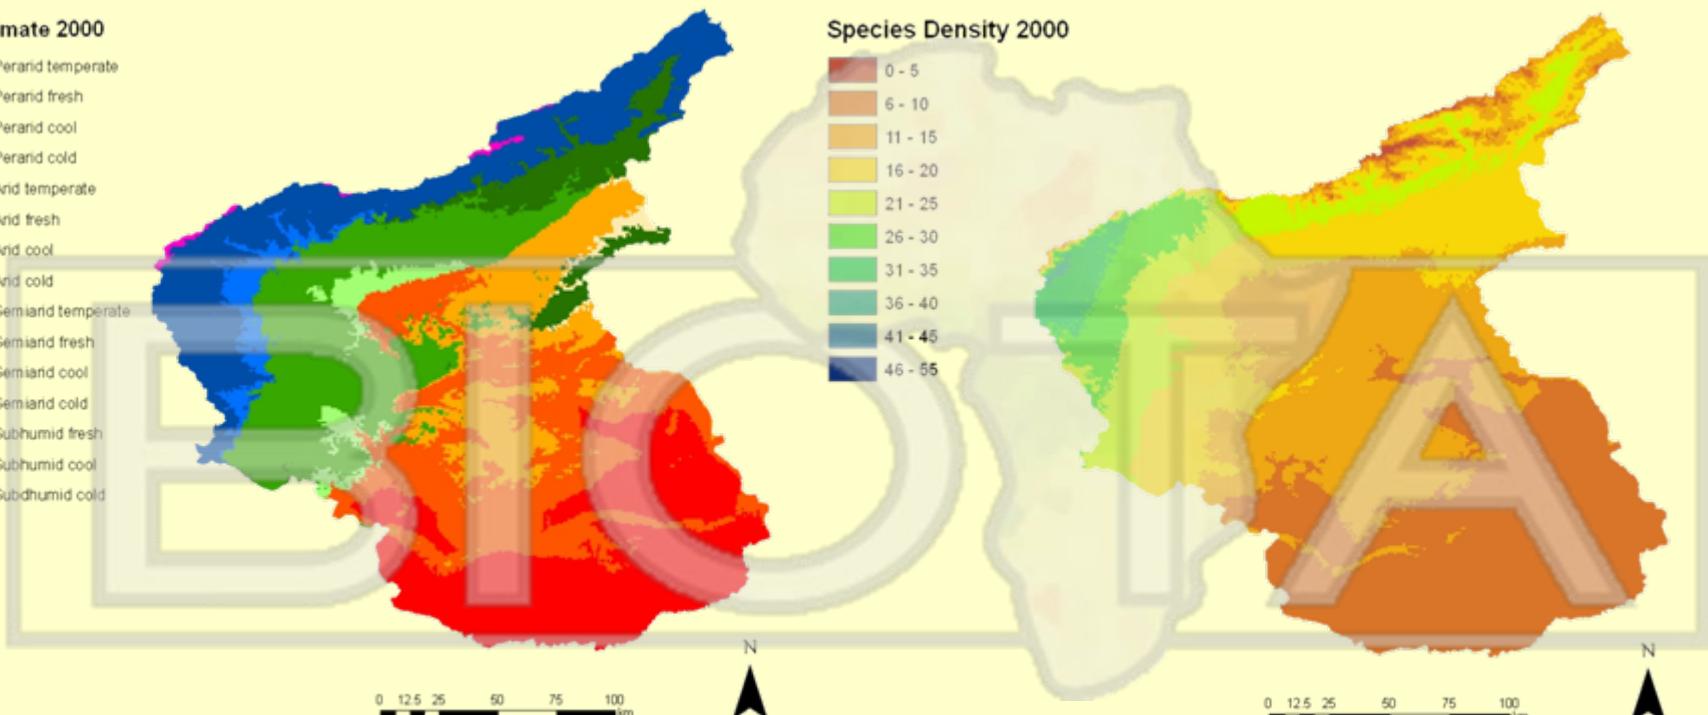

Changes in bioclimate and species density until 2080 in the Drâa Basin, Morocco

Bioclimate 2000

- [Red] Periarid temperate
- [Orange] Periarid fresh
- [Yellow] Periarid cool
- [Light Orange] Periarid cold
- [Light Green] Arid temperate
- [Green] Arid fresh
- [Dark Green] Arid cool
- [Very Dark Green] Arid cold
- [Light Blue] Semiarid temperate
- [Medium Blue] Semiarid fresh
- [Dark Blue] Semiarid cool
- [Very Dark Blue] Semiarid cold
- [Purple] Subhumid fresh
- [Pink] Subhumid cool
- [Magenta] Subhumid cold

Species Density 2000

- [Dark Red] 0 - 5
- [Brown] 6 - 10
- [Light Brown] 11 - 15
- [Yellow] 16 - 20
- [Light Green] 21 - 25
- [Medium Green] 26 - 30
- [Dark Green] 31 - 35
- [Teal] 36 - 40
- [Dark Teal] 41 - 45
- [Very Dark Teal] 46 - 55

2000

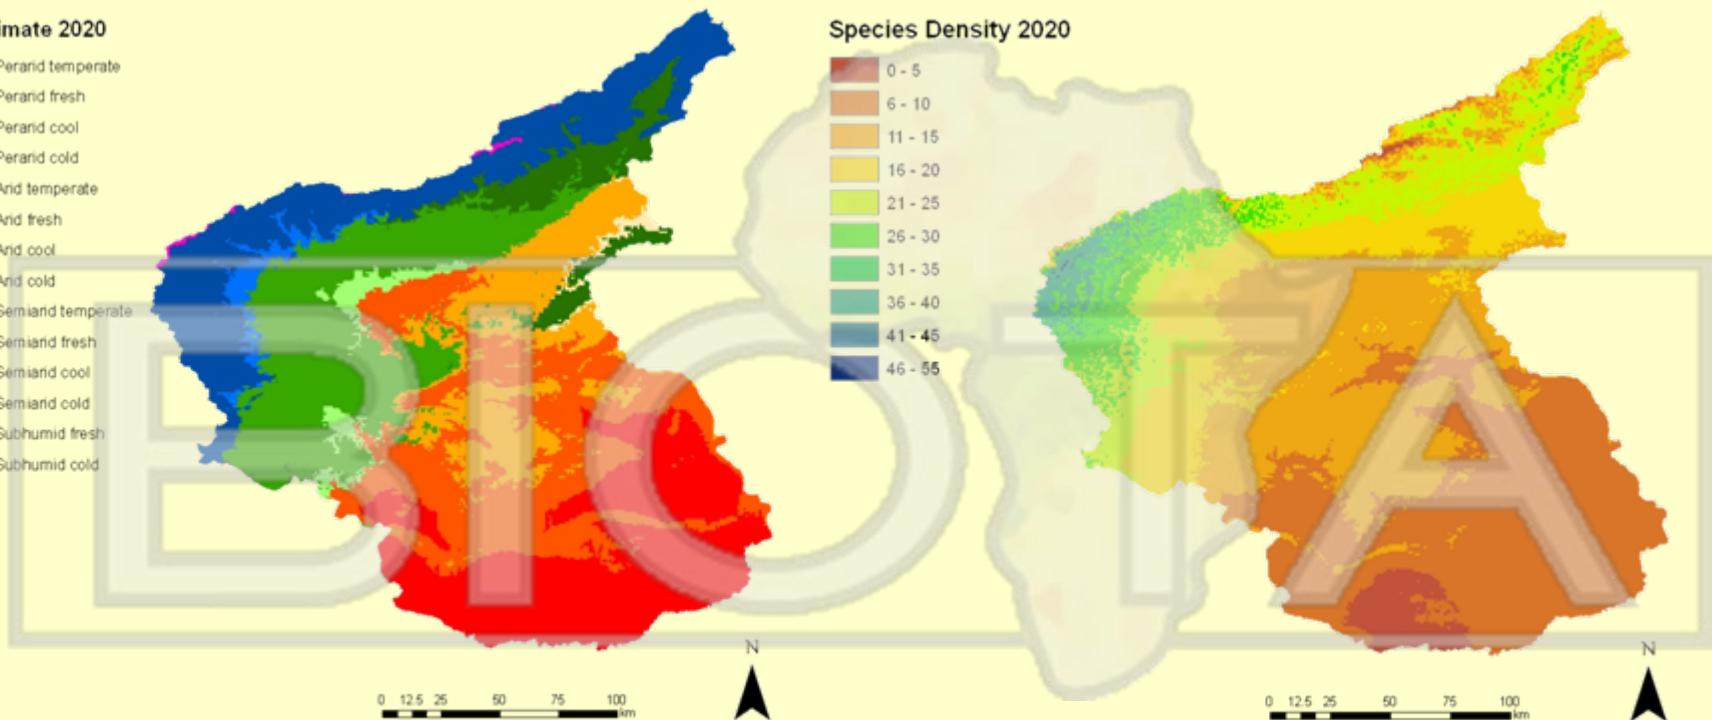

Changes in bioclimate and species density until 2080 in the Drâa Basin, Morocco

Bioclimate 2020

- [Red] Periarid temperate
- [Orange] Periarid fresh
- [Yellow] Periarid cool
- [Light Orange] Periarid cold
- [Light Green] Arid temperate
- [Green] Arid fresh
- [Dark Green] Arid cool
- [Very Dark Green] Arid cold
- [Light Blue] Semiarid temperate
- [Medium Blue] Semiarid fresh
- [Dark Blue] Semiarid cool

- [Dark Blue] 41 - 45
- [Very Dark Blue] 46 - 55

2080

Plants 2080: winner- and loser-regions

Change of species richness

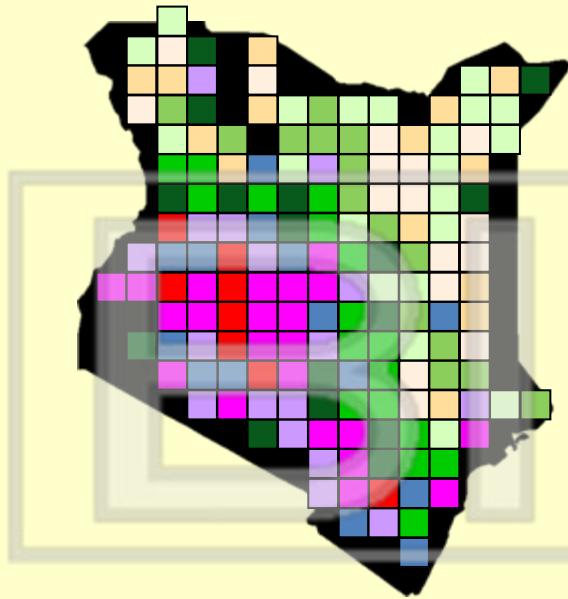

Case study Kenya

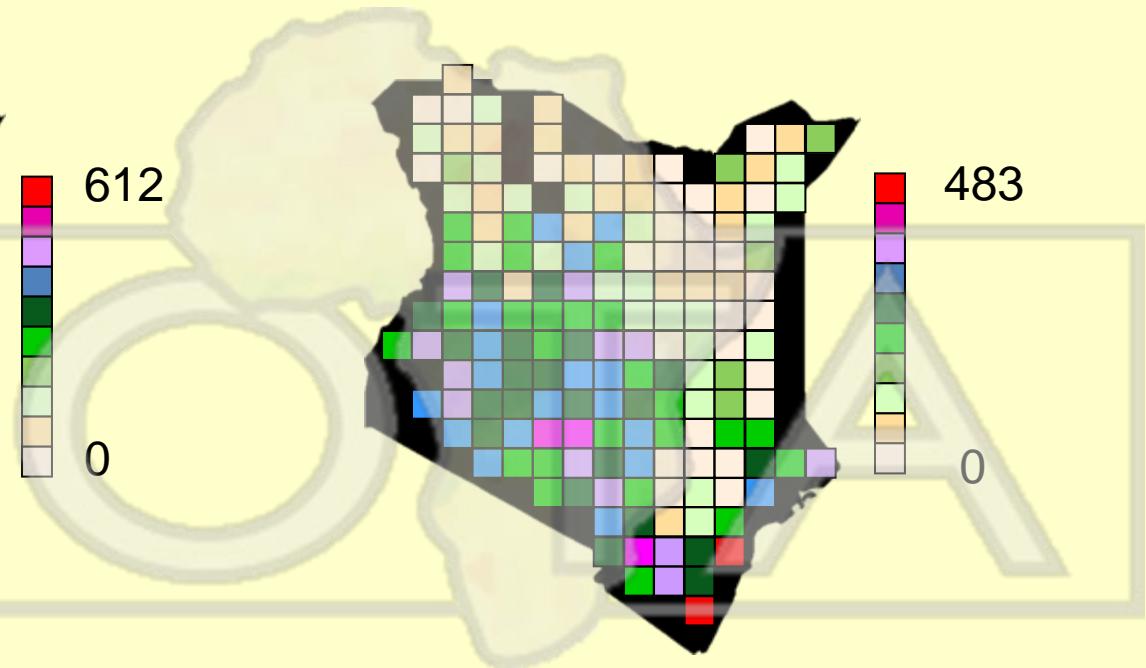

cross-taxon diversity:
birds and plants

Birds and Plants: species richness patterns

(A) Bird richness

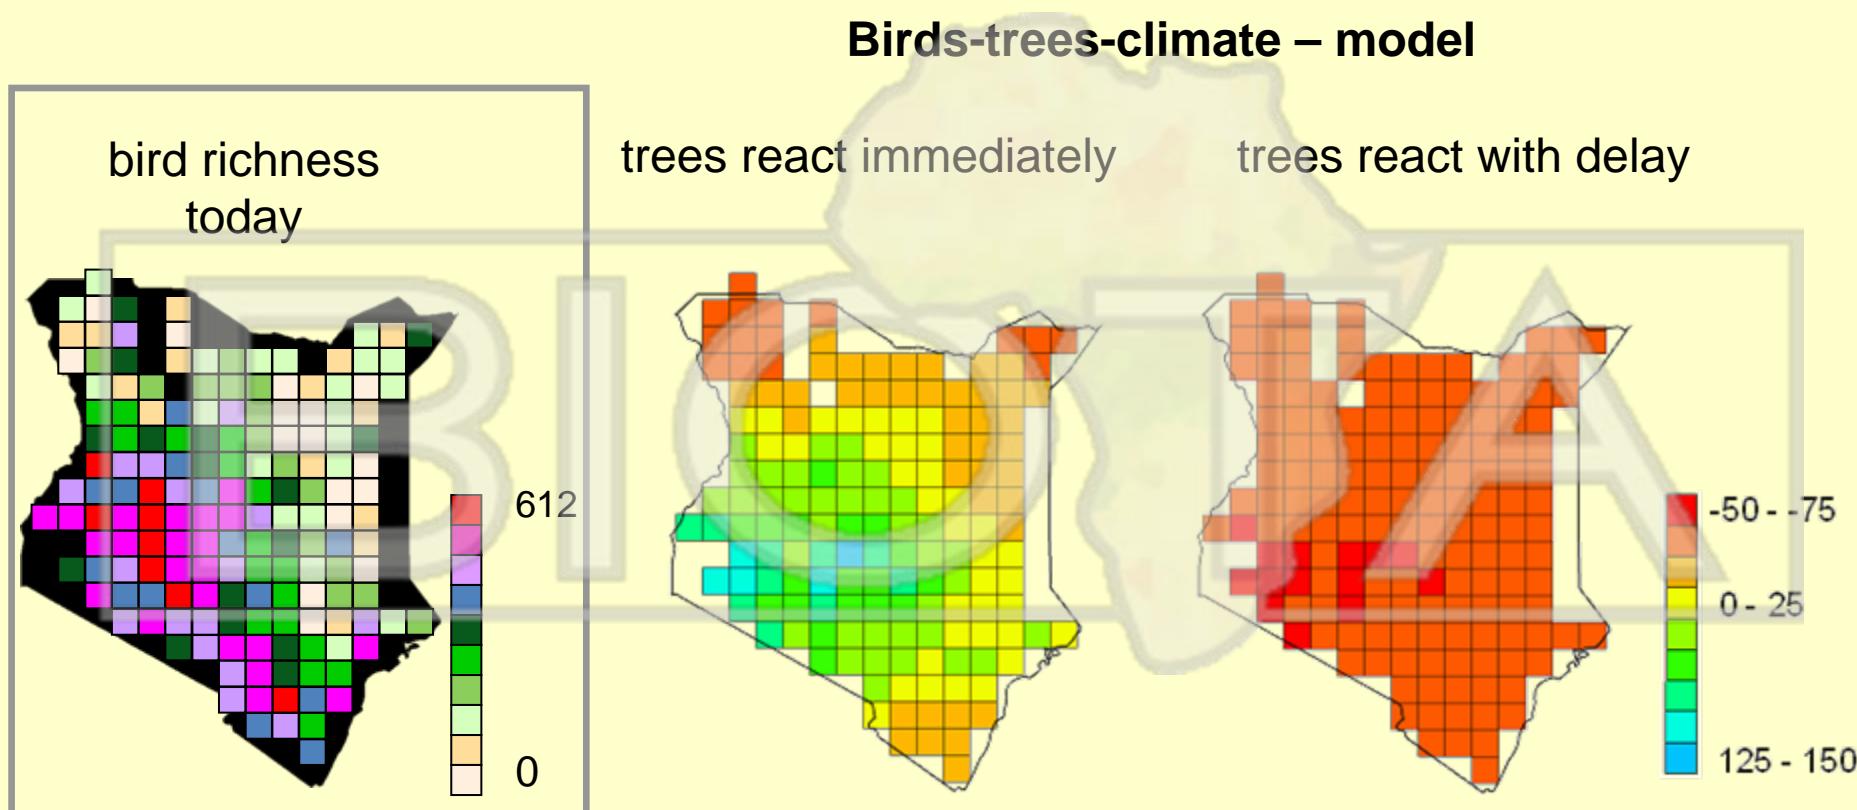

(B) Woody plant richness

Kissling, Field, Korntheuer, Heyder, Böhning-Gaese, *in preparation*

Birds and trees: future scenarios

Possible changes in bird species richness in Kenya (2069-2098)

Kissling, Field, Korntheuer, Heyder, Böhning-Gaese, *in preparation*

Summary

- Models: decline in plant richness for most parts of Africa
- Decline strongest in arid and semi-arid areas
- Large differences across different scenarios and models
- Strong biotic interactions between plants and birds
- Birds depend more on vegetation than directly on climate

Future Visions

- Include functional aspects into models
 - Biotic interaction networks
 - Evolutional / phylogenetic aspects
 - Population dynamics
 - Pollination and dispersal
 - Adaptation capability
 - Ecosystem resilience
- Incorporate effects of landuse and habitat degradation
- Develop climate change mitigation and adaptation strategies

Cooperation & data contribution

Many scientists and institutions inside and outside BIOTA, e.g., A. Thiombiano, G. Zizka, German Remote Sensing Data Center (DLR), Universities of York (J. Lovett, R. Marchant), California, San Diego (W. Jetz), Copenhagen (J. Fjeldså, I. Friis), Zurich (P. Linder). More than 20 scientists and institutions provided species collection data, e.g.: H. Beentje, F. Casas, C. Chatelain, P. Craven, J. Degreef, P. Frankenberg, L. Gautier, D. Kirkup, S. Liede, R. Polhill, T. Rebelo, R. v. Rompaey, M. Sosef, M. Velayos, J. Wieringa
